

PRODUCT SPEAR HEAD

THERMAL OXIDIZER TECHNOLOGY

#WEBREATHEMISSIONCONTROL

“We feel the burning desire to solve your process emissions”

The right equipment in the right place will optimize air pollution control with a minimum use of auxiliary fuel. Thermal oxidizer systems can destroy up to 99,9% of • Air toxins • Odors • VOC's • HAP's

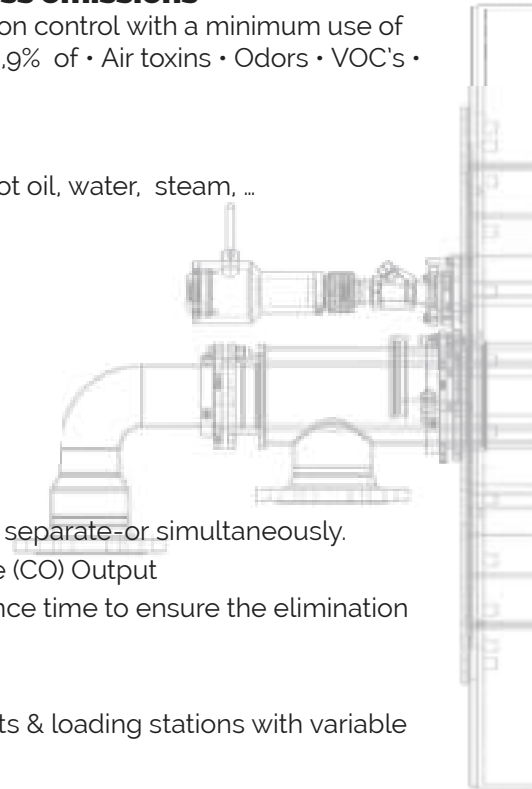

Range :

- Oxidizers with or without heat recovery to process hot oil, water, steam, ...
- Recuperative oxidizers
- Catalytic thermal oxidizers (CTO)
- Regenerative thermal oxidizers (RTOs)
- Vapor combustor (VCU)

USP's :

- Skid mounted reduces installation time and costs
- Horizontal-or vertical design
- independent waste process streams can be injected separate-or simultaneously.
- reduced Nitrogen Oxide (NOx) and Carbon Monoxide (CO) Output
- high performance refractory lining and a min. residence time to ensure the elimination of harmful components

Contact us: for ideal solutions in mixing operations, tank vents & loading stations with variable process flow rates and vapor concentrations
